

Native App

With the native Avantalytics app for iOS and Android, take your Avantalytics mobility to the next level.

The native app is capable of allowing field staff to do the following:

1. Localizing to a specific store, so staff can receive store-specific tasks and inventory lists
2. Automatically clocking staff in and out when they localize to and leave a store, thereby tracking work hours
3. Managing in-store inventory through both a built-in bar code scanner and a comprehensive inventory list
4. Assign staff store-specific tasks and questionnaires outside of the basic inventory tasks
5. Allow staff to upload relevant stock photos and add notes tied to specific store visits
6. Track shipment details
